

## CT OF THE CHEST

PATIENT NAME			
HIS ID		GESY REGISTRY NO	
EXAMINATION DATE	03-02-2022(09:27)	GESY REFERRAL NO: 35902952 EXAM CODE: 71250 EXAM DESCRIPTION: Computed tomography, thorax; without contrast material	
DATE OF BIRTH			
POLICE ID			

*The examination was conducted with multislice CT, without I.V. contrast administration.*

### FINDINGS

*There is a 3mm nodule in the apex of the right lung (Se:2, Im:49).*

*The lungs are otherwise clear.*

*There is no evidence of interstitial lung disease.*

*There is no pericardial or pleural effusion.*

*There is a borderline subcarinal lymph node, measuring 11mm in short axis, that maintains the normal fatty hilum.*

*There is no axillary lymphadenopathy.*

*Unremarkable unenhanced appearances of the imaged upper abdominal organs.*

*No destructive bone lesions.*

### CONCLUSION

*3mm nodule in the apex of the right lung, may be benign in nature.*

*Borderline subcarinal lymph node, measuring 11mm in short axis.*

*Comparison on follow up is advised.*

*Dr. Elia Petridou*

*Diagnostic Radiology Consultant*
