

## MRI OF THE PARANASAL SINUSES

PATIENT NAME			
HIS ID		GESY REGISTRY NO	
EXAMINATION DATE	03-02-2022(10:07)	GESY REFERRAL NO: 35902928 EXAM CODE: 70540 EXAM DESCRIPTION: Magnetic resonance (eg, proton) imaging, orbit, face, and/or neck; without contrast material(s)	
DATE OF BIRTH			
POLICE ID			

*Reason for examination: Patient with early recurrent tumor in the maxillary sinus right. Resection in 09/21. Tumor extension for planning of radiotherapy.*

*Enhanced paranasal sinus protocol.*

*Comparison made with the previous MRI scan dated 03/01/2022, performed at a different diagnostic centre.*

### FINDINGS

*Compared to the previous MRI dated 03/01/2022, there is mild increase in the size of the pathological soft tissue centered in the right maxillary sinus with extension into the right retromaxillozygomatic and masticator space and along the course of the trigeminal nerve into the right Meckel's cave.*

*The lesion also extends into the floor of the orbit and is in close proximity to the inferior rectus muscle.*

*There is a small amount of fluid layering in the left maxillary sinus, likely secondary to sinusitis.*

*Fluid accumulation is again noted in the mastoid air cells.*

*Clinical correlation and follow up is advised.*

*Dr. Elia Petridou*

*Diagnostic Radiology Consultant*
