**HISTOPATHOLOGY REPORT**

Test date 03/08/2021

Doctor **LIMASSOL HOSPITAL-PERDIKIS  
IOANNIS**

Diagnosed 05/08/2021

**SPECIMEN**

Right renal tumor biopsies for histology.

**MACROSCOPY**

The specimen consists of three cylinders 1,2 cm length.

**MICROSCOPY**

The microscopic examination shows tumor composed of large pale cells with abundant cytoplasm, foamy from the presence of lipid and glycogen. The nuclei are vesicular and fairly pleomorphic. They have prominent nucleolus increase mitotic figures. The stroma is scanty, increase hemorrhagic and necrotic.

**CONCLUSION**

The appearances are consistent with clear cell carcinoma of the kidney.  
Fuhrman Grade 2
