HISTOPATHOLOGY REPORT

CLINICAL DATA: Tru-cut needle biopsies of prostate for histology.

Macroscopic: The specimen consists of four whitish pieces of prostatic tissue.

Microscopic: Histological examination shows well differentiated adenocarcinoma of the prostate. It composed of irregular acini and glandular spaces lined by atypical cells with hyperchromatic nuclei and pale cytoplasm. The carcinoma is present in one biopsy.

Conclusion: The appearances are consistent with well differentiated adenocarcinoma of the prostate.
Gleason: Grade I-II. Gleason Score: 2+3.

Date : 30/05/02
