**SPECIMEN**

Tru-cut prostate biopsies for histology.

**MACROSCOPY**

The specimen consists of

1. Seven cylindrical pieces of tissue meas. 0.8-1.2cm. (right lobe)
2. Six cylindrical pieces of tissue meas. 0.6-1cm. (left lobe)

**MICROSCOPY**

The microscopic examination shows :

1. Prostatic adenocarcinoma Gleason score 7 (grade 4 + grade 3). The carcinoma involved all the biopsies of the right lobe.

Immunohistochemistry: AMACR (+), P63(-), CK5/6(-)

2. Pieces of prostate with nodular hyperplasia .

**CONCLUSION**

The appearances are consistent with prostatic adenocarcinoma of the right lobe

Gleason score 7 (grade 4 + grade 3)

Grade Group 3 .
