MEDICAL REPORT

Re: Mr *[Faint signature]*

Diagnosis: 1. Transvesical prostatectomy (2019)- BPH
2. PSA 8.8
3. MRI- PIRADS 5 LEFT
4. TRUS and biopsy: Gl 4+3 ALL cores on the left

Recommendation: 1. Staging
2. Radiotherapy/ Brachytherapy

The aforementioned gentleman presented with a rising PSA of 8.8ng/ml following his transvesical prostatectomy in 2019.

On rectal examination there was a T2 prostate

TRUS and prostate biopsy revealed a Gl 4+3 ca rcinoma prostate in ALL cores from the LEFT side

He warrants full staging and active treatment with EBRT vs Brachy vs combination

Yours Sincerely,

Mr Chryssanthos Kouriefs BM BCh MSc MRCS FRCS Urol
